

## Protection & Safety

Prevention of intraoperative and postoperative infection is a top priority in any OR setting. With regard to the products used in the OR, this means that they have to meet the most exacting demands. The only way to provide safe protection for patients and staff is to interfere as fully as possible with all potential routes of transmission. OR products by Lohmann & Rauscher go a long way in this regard.

The Raucodrape sterile OR drape system by L&R frequently meets and even exceeds the requirements stipulated by the European EN 13795 series of standards, in which the basic requirements for OR drapes and

gowns are defined. Relevant specifications include minimum values for resistance against liquid and germ penetration. Raucodrape NEW provides a complete barrier and is an essential factor in effective infection prophylaxis in the OR setting. In combination with Sentinex OR clothing, the Kitpack OR Procedure Tray, and the Setpack OR Dressing Materials, L&R provides a comprehensive range of products for any type of surgical procedure.

## Cost-effectiveness & Competence

Our medical product consultants, will help you analyse your specific work processes and procedures and develop individualised, economical solutions.

## Monitoring & Quality

All products are specifically designed in function and material to meet applicable individual requirements, and are subject to continuous monitoring for quality in accordance with strict criteria. We attach utmost importance to in-house safety standards, some of which even exceed applicable legal requirements.
