

Setpack[®] OR Dressing Materials Individual Sets

The Setpack Individual Range offers the possibility to create OR Dressing Material Sets according to your requirements.

Together with our medical consultants you decide on quantities and sizes of wound and absorbent dressings, gauze balls, dissecting swabs, cotton tipped

applicators, ribbon gauze, laparotomy swabs and bandages. We take care of the professional production of your "made to measure" set.

The Individual Set should form the basis for the specific operation. Additional requirements will be supplied from the Standard Set.

Kitpack[®] OR Custom Procedure Tray

Kitpack is an efficient OR system made up from various ready-for-use OR components. Apart from dressing materials of various types and quantities, OR drape systems and clothing, it contains additional disposable medical products. For example drains, disposable syringes and cannulae, suture materials and other disposable components. In compact packaging, sterile and ready-for-use.

Sets are compiled standardized and yet individually determined for the requirements in your hospital, selected for the surgical intervention for which it is intended.

By using prefabricated Kitpacks, you will reduce preparation time and procedure costs – with full safety and the necessary flexibility.
